## Doubling the Value – a Mobile App for Learning and as Learning

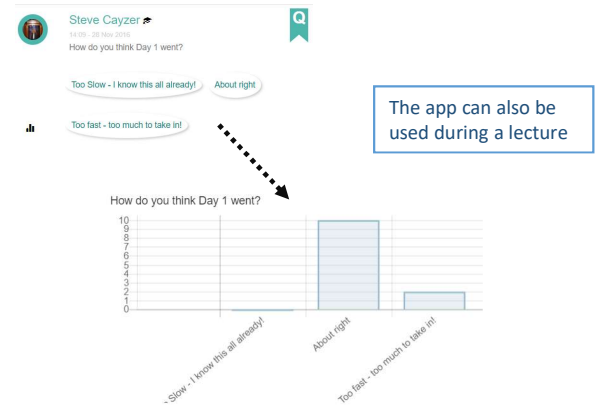

StudySpace is a mobile phone app developed at the University of Bath for student learning. The intention is to post comments, questions and polls quickly, painlessly and anonymously. The app has been developed with students and educators; it is undergoing constant development in response to feedback.

The process of gathering feedback can be embedded into teaching (on agile software development). In this way a class workshop is transformed from an abstract, 'toy' exercise to a meaningful learning experience with tangible value to students, educators and learning technology developers.
